The bracket on random graphs: the theorems' floor and ceiling against proved pathwidths
proved pathwidth: median, min–max
recipe (median): min-fill tw, or n − s_block + 1 at p = ½
floor: first moment at 0.05
ceiling: min(random ordering, n − α_greedy)
G(n, c/n), c = 3
G(n, c/n), c = 6
G(n, c/n), c = 10
G(n, p), p = 1/2
