
The quick estimate against the proved value: every certified instance, one panel per regime
blue: dot area = number of instances in the cell (identity line in grey)
orange bars: the bracket [floor, ceiling] of three instances per panel, at the quartiles of n
Chu & Stuckey (200)
exact 6%, MAE 3.79
Harvey (2,130)
exact 57%, MAE 0.71
Faggioli-Bentivoglio (300)
exact 40%, MAE 0.72
Simonis (3,630)
exact 57%, MAE 0.81
ensembles n <= 40 (37,800)
exact 54%, MAE 0.70
ensembles 50-100 (6,751)
exact 16%, MAE 2.71
G(n, c/n) (6,542)
exact 59%, MAE 0.50
G(n, p), p = 1/2 (80)
exact 62%, MAE 0.40
Rome graphs (11,199)
exact 55%, MAE 0.46
